Part 1: Planning your medical career delves into the main issues surrounding the choice of your medical specialty. These twelve chapters provide everything you need to begin making this major decision from how to research each specialty to how to apply for residency. Part 2: Specialty profiles features chapters devoted to each of the 20 major specialties. It provides important information such as the latest salary information, employment data and match statistics. Features an insider's look at different areas of medicine with specialty chapters written by physicians just out of residency training. Candid and revealing descriptions of each specialty. Profiles of the major specialties including those to which you may have had little exposure such as radiation oncology. A concise up-to-date guide to the residency application and matching process. A chapter with valuable advice to help you maximize your success in obtaining a residency position in each field. Updated to include alternative career paths for MDs such as laboratory science, the military MD, MBA and MD/JD. This book helps medical teachers and students develop the best approach to ensure a high level of learning achievement. Dr. Abdullah Dukhail Al-Khatami begins by outlining the traditional learning model and how it differs from the learner-centered model. He argues that we must recognize the ineffectiveness of how we've taught medical students in the past. The best way to achieve learning, he says, is to encourage learning skills and collaboration. Learning between the learners and their supervisors through the supervision meeting, assessment to identify their learning gap, achievement process and achievement assessment instead of focusing on surface learning or memorization. Learner-centered learning connects current learning to past experiences that leads to deep learning and helps learners organize information. This newer approach leverages small groups to further the learning process, feedback, reflection and work-based assessments.

measure achievements by following the models best practices youll be able to prepare trainees to succeed in the field manage your time more efficiently encourage appropriate communication skills and professionalism and convince trainees that goals are achievable filled with checklists summaries graphs exercises and additional resources this is a must have guide for anyone serious about medical education

Medical Training and Working in the UK 1996

this book helps medical teachers and students develop the best approach to ensure a high level of learning achievement dr abdullah dukhail al khatami begins by outlining the traditional learning model and how it differs from the learner centered model he argues that we must recognize the ineffectiveness of how we ve taught medical students in the past the best way to achieve learning he says is to encourage learning skills and collaboration learning between the learners and their supervisors through the supervision meeting assessment to identify their learning gap achievement process and achievement assessment instead of focusing on surface learning or memorization learner centered learning connects current learning to past experiences that leads to deep learning and helps learners organize information this newer approach leverages small groups to further the learning process feedback reflection and work based assessments measure achievements by following the models best practices you ll be able to prepare trainees to succeed in the field manage your time more efficiently encourage appropriate communication skills and professionalism and convince trainees that goals are achievable filled with checklists summaries graphs exercises and additional resources this is a must have guide for anyone serious about medical education
