this book provides contemporary insights into learning outcomes arising from the use of learning platforms by pupils students and teachers in schools most current research focuses on the implementation of learning platforms and the ways in which practices are developing over time or in specific contexts this collection offers a range of contrasting but complementary perspectives in this area including an exploration of applications supporting management of learning across primary and secondary schools in the uk an in depth case study of uses and outcomes in a school in singapore an analysis of learning outcomes arising across primary special and secondary schools in one local authority in the uk and a look at student preferences for using a learning platform in a school in taiwan the volume sheds important light on the subject but with the ever changing development and introduction of learning platforms much remains to be explored indeed it is likely that learning platforms will evolve further with affordances and integrated features being added over the next five and more years this work hints at future practices and their potential outcomes pointing to the need for greater detail being gathered through future research studies in order to understand ways teachers and learners might most effectively benefit from more holistic or blended approaches across the applications provided this book will not only be of particular interest to those involved in using learning platforms but also to those advising on and developing learning platforms key lessons and issues are of relevance to policy makers school managers and teachers educational advisers researchers and developers this book was originally published as a special issue of learning media and technology

the z notation has been developed at the programming research group at the oxford university computing laboratory and elsewhere for over a decade it is now used by industry as part of the software and hardware development process in both europe and the usa it is currently undergoing bsi standardisation in the uk and has been proposed for iso standardisation internationally in recent years researchers have begun to focus increasingly on the development of techniques and tools to encourage the wider application of z and other formal methods and notations this volume contains papers from the seventh annual z user meeting held in london in december 1992 in contrast to previous years the meeting concentrated specifically on industrial applications of z and a high proportion of the participants came from an industrial background the theme is well represented by the four invited papers three of these discuss ways in which formal methods are being introduced and the fourth presents an international survey of industrial applications it also provides a reminder of the improvements which are needed to make these methods an accepted part of software development in addition the volume contains several submitted papers on the industrial use of z two of which discuss the key area of safety critical applications there are also a number of papers related to the recently completed zip project the papers cover all the main areas of the project including methods tools and the development of a z standard the first publicly available version of which was made available at the meeting finally the volume contains a select z bibliography and section on how to access information on z through comp specification z the international computer based usenet newsgroup z user workshop london 1992 provides an important overview of current research into industrial applications of z and will provide invaluable reading for researchers postgraduate students and also potential industrial users of z

this book does not tell a story instead it is about stories or rather in technical terms it is about scenarios scenarios of system behavior it concentrates on reactive systems be they software or hardware or combined computer embedded systems including distributed and real time systems we propose a different way to program such systems centered on inter object scenario based behavior the book describes a language two techniques and a supporting tool the language is a rather broad extension of live sequence charts lscs the original version of which was proposed in 1998 by w damm and the first listed author of this book the first of the two techniques called play in is a convenient way to play in scenario based behavior directly from the system's graphical user interface the second technique play out makes it possible to execute or play out the behavior on the gui as if it were programmed in a conventional intra object state based fashion all this is implemented in full in our tool the play engine the book can be viewed as offering improvements in some of the phases of known system development life cycles e.g requirements capture and analysis prototyping and testing however there is a more radical way to view the book namely as proposing an alternative way to program reactivity which being based on inter object scenarios is a lot closer to how people think about systems and their behavior

when men of knowledge impart this knowledge i do not mean they will convince your reason i mean they will awaken in you the faith that it is so sri krishna bhagavadgita background the use of computers has led to significant productivity increases in the engineering industry most of the computer aided engineering applications were restricted to algorithmic computations such

as finite element programs and circuit analysis programs however a number of problems encountered in engineering are not amenable to purely algorithmic solutions these problems are often ill structured the term ill structured problems is used here to denote problems that do not have a clearly defined algorithmic solution an experienced engineer deals with these ill structured problems using his/her judgment and experience the knowledge based systems kbs technology which emerged out of research in artificial intelligence ai offers a methodology to solve these ill structured engineering problems the emergence of the kbs technology can be viewed as the knowledge revolution other important events that led to increased productivity are the industrial revolution 17th century the invention of the transistor and associated developments first half of the 20th century and the world wide web towards the end of the 20th century kurzweil in a lecture at MIT on december 3 1987 linked the progress of automation to two industrial revolutions the first industrial preface xxxii revolution leveraged our physical capabilities whereas the second industrial revolution the knowledge revolution is expected leverage our mental capabilities
