this book comprises twelve articles which cover a range of topics from musical instrument acoustics to issues in psychoacoustics and sound perception as well as neuromusicology in addition to experimental methods and data acquisition modeling such as fem or wave field

synthesis and numerical simulation plays a central role in studies addressing sound production in musical instruments as well as interaction of radiated sound with the environment some of the studies have a focus on psychoacoustic aspects in regard to virtual pitch and timbre as well as apparent source width for techniques such as stereo or ambisonics in music production since musical acoustics imply subjects playing instruments or singing in order to produce sound according to musical structures this area is also covered including a study that presents an artificial intelligent agent capable to interact with a real analog player in musical genres such as traditional and free jazz
